

We've heard that some schools have been distributing devices on school property with scheduled pick up times or drive-thrus to help get students set up for remote learning. But we've also heard that many districts are delivering devices to students' homes and that the Tech Tub has proven to be very helpful.

1 A cart can't do this

A tech director has been taking Tech Tub on a road trip to deploy devices to students. They loaded up their vehicle with Tech Tubs from their school and delivered Chromebooks door-to-door. The Tubs packed up easily, prevented damage and made it quick to deploy devices.

2 Ready for anything, anywhere

District level staff working remotely can keep Tech Tubs of spare devices at home. This allows them to be ready when a student's device breaks down or needs servicing. They are able to deliver a working device to the student and reduce down time. The lock comes in handy as well to secure school property while off-site.

3 Back to school and future-proofed

Have new devices returning to school before the summer begins or when school starts up in the fall? Tech Tubs and Trolleys are the perfect solution for charging, storing and locking up devices and you'll be ahead of the game should you need to deploy them door-to-door again! Tech Tubs and Trolleys can hold six or ten devices.
